

Environmental policy for production, product development and logistics operations at Berner Ltd

We consider the responsible management of issues related to the environment, health and safety to be an integral aspect of our business. We are committed to follow the laws and regulations concerning our operations and to monitor the development of legislation. By favouring domestic materials and services, we ensure that knowhow and jobs remain in Finland.

We are committed to the chemical industry's international Responsible Care program. We continuously improve our operations and knowhow so that we can develop and manufacture high-quality products that put less of a burden on the environment. Through our selection of raw materials we ensure that our products and processes are safe for both the user and the environment.

We carry out work developing raw materials and packaging in cooperation with our interest groups. The goal of our product development is to facilitate the recyclability of packaging and to minimise the amount of waste. We handle chemicals carefully and use materials efficiently. By choosing domestic products and services, we shorten transport distances and reduce the amount of transport-related emissions.

We educate our personnel about matters related to the environment and safety. We inform our customers and interest groups about our environment-related operations and their development annually.

Helsinki, 15th March 2018

Antti Korpiemi
CEO
